

SDK Installation Guide

reading time: 1 minute 51 seconds (so time to read it twice!)

Thanks for reading our installation guide for the TASBooks SDK. We know you loved how much fun you had installing the SDK up to now. So we took another crack at it.

The result: **Single** installation file. **Simple** installation routine.

Key Points

1. Will not install on Windows XP computers. Ever.
2. Requires v4.5 of the Microsoft .NET Framework - you should already have it but if not then grab from <https://www.microsoft.com/en-gb/download/details.aspx?id=30653>
3. **TASLink** = Developer software, not for Production/Live environment use
4. **TASFlex** = End-user software, for Production/Live environment use
5. To install this version requires a live TASLink and/or TASFlex support contract
6. Removes dependency on System Integration Manager (SIM)

Installing the SDK

For: when you are installing the SDK on a computer for the first time.

1. Download the installation file from our website
 2. Close TASBooks and any other open programs
 3. Right-click on the installation file, select Run As Administrator
 4. Select the edition of the SDK that you use
 - Developer? Select **TASLink**
 - Not a developer? Select **TASFlex**
 - Unsure? check a recent invoice from us - **it will tell you**
 5. Accept the Software Licence Agreement by having a wee read of it then ticking the box
 6. Click Install
-

Running it for the first time

1. Right-click on the **Infoplex SDK Control Centre** icon on your Desktop, select *Run As Administrator*
2. A new window appears titled 'Setup Form'. Select the option that suits but if in doubt
 - Setting up first computer? Choose **Network Setup**
 - Other computer? Choose **Network Client Setup**
3. Verify your system date is correct then click Yes
4. Confirm your selection by clicking Yes
5. A new window opens - find the folder that stores your TAS data then click OK
 - Not sure? right-click your TAS company in TAS Company Manager
 - Select Open Company Data Folder
 - Go 'up' a folder level in Explorer - it's this folder
6. The software will confirm setup was successful
7. Login and follow prompts to complete setup

Upgrading the SDK

For: when you already have the SDK installed.

1. Download the installation file from our website
2. Close TASBooks and any other open programs
3. Right-click on the installation file, select *Run As Administrator*
4. Select the edition of the SDK that you use
 - Developer? Select **TASLink**
 - Not a developer? Select **TASFlex**
 - Unsure? check a recent invoice from us - it will tell you
5. Accept the Software Licence Agreement by having a wee read of it then ticking the box
6. Click Install and wait for it to finish!

NOTE: If you also use MultiTAS (why wouldn't you!) then you will need to update it to the current version (v4.5.1 at time of writing)

Running it for the first time

1. Right-click on the **Infoplex SDK Control Centre** icon on your Desktop, select *Run As Administrator*
2. Login
3. A new window appears titled 'Add/Update Modules' - click Continue
4. An 'Application Updated' message appears saying the update was successful. Click OK

If you hit issues... **don't panic** (it's likely our fault, not yours), we are here to help!
